Company Description

Advanced Composites Inc. is the leading supplier of TPO's (Thermoplastic Olefins) and Polypropylene Compounds targeted exclusively for the Automotive Market. The product line consists of proprietary formulations to meet customer-specific specifications and applications. We are a subsidiary of Mitsui Chemicals.

Job Description

The Product Development Engineer will Research and Develop new materials to meet or exceed our customers' requirements. This is a hands-on job: the selected individual will formulate, produce, and evaluate new material compositions on the pilot level.

Job Title: Product Development Engineer

Skill Requirements

A highly motivated self starter that is interested in pursuing a career in Automotive Plastics is essential to success. Working knowledge of Microsoft Office- especially Excel, Word, and PowerPoint is preferred.
